

# ARC 2.0: BUILDING A GENERATION OF ANIMAL FREE SCIENTISTS

Animal Replacement Centre (ARC 2.0) is a new research programme co-created by Animal Free Research UK and The University of Exeter.

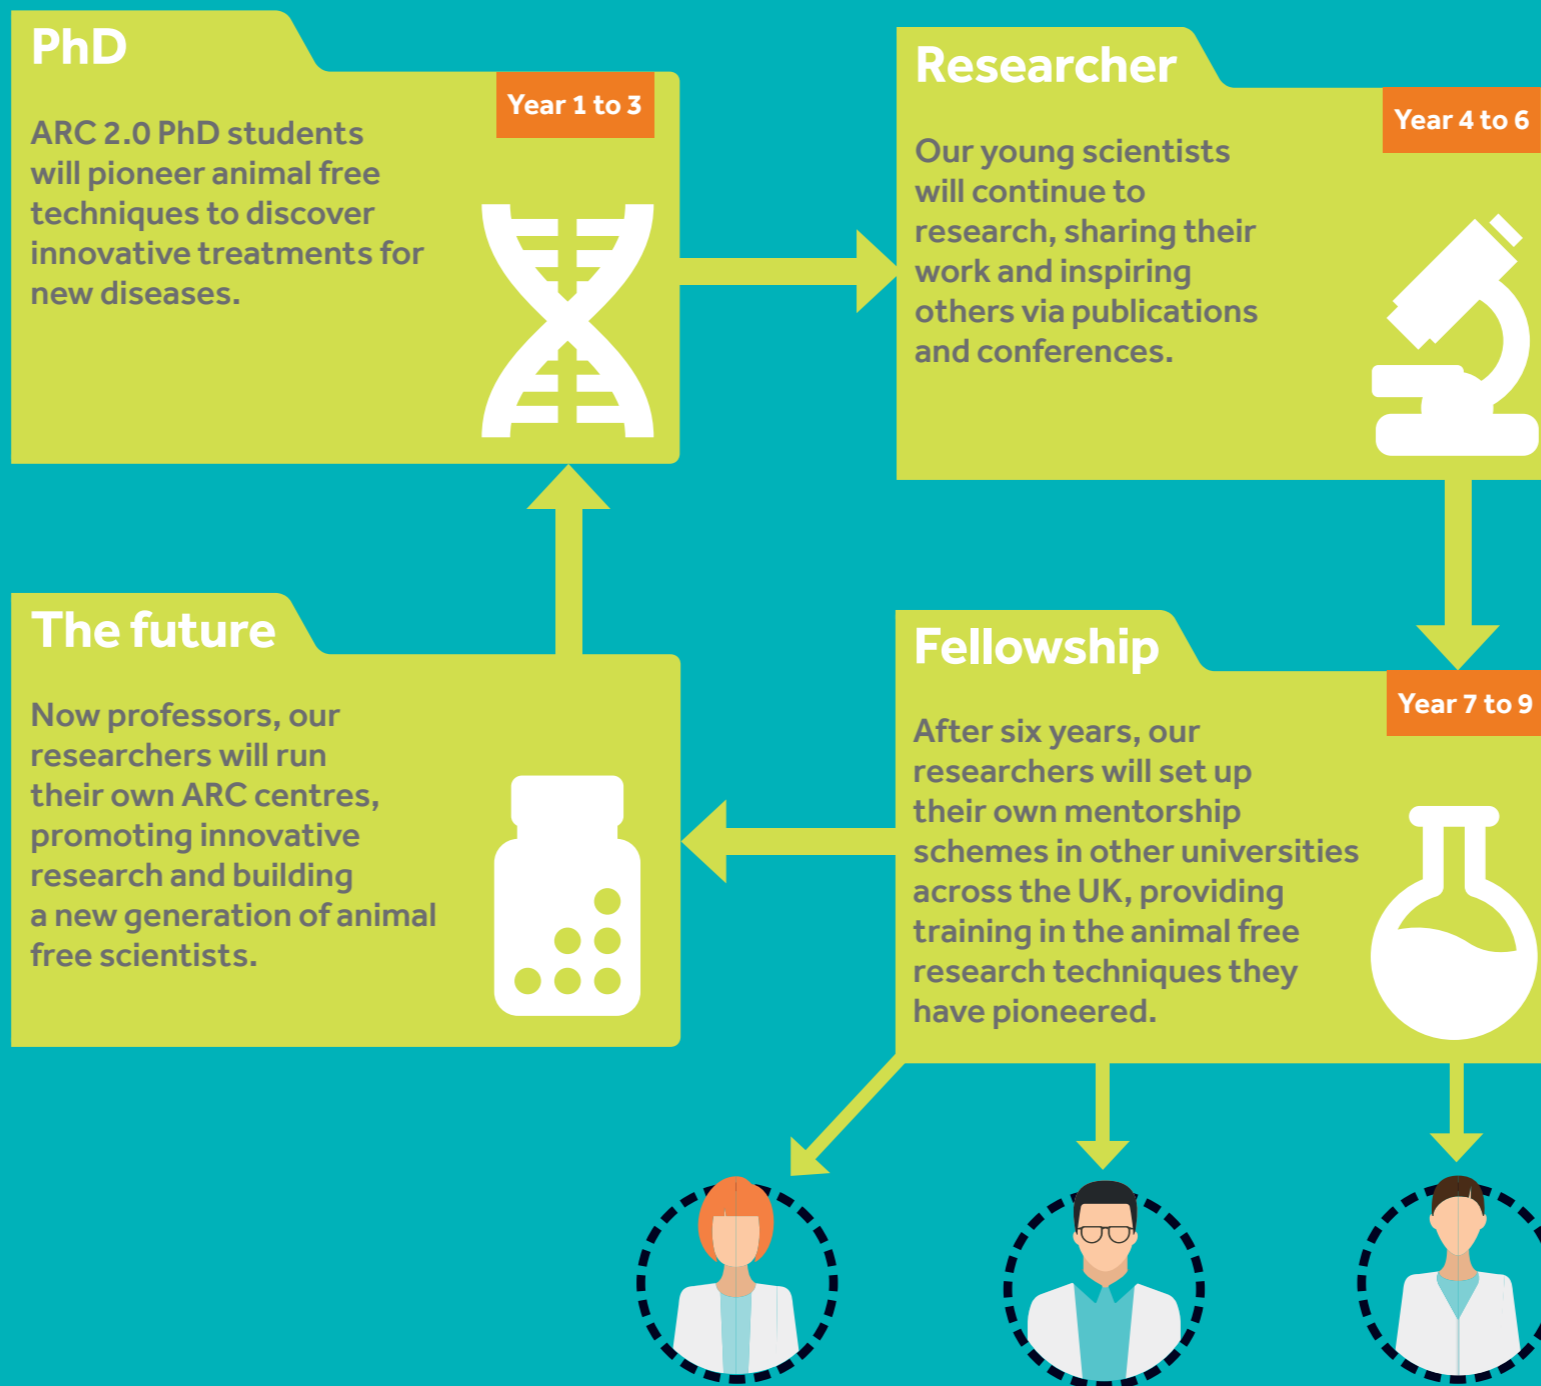

## How ARC 2.0 will change the face of medical science

### Animal free science: better for everyone

As well as saving millions of animals from laboratories, animal free research is better for people. Treatments tested on animals frequently fail in human trials, and can even harm people.

**Support the science of the future**  
By supporting ARC 2.0 you will be bolstering a movement towards real advancement in medical research – without harming animals.

### The future: animal free science saves millions of lives

- Every minute of every day, 7 animals are used in research in the UK
- In 2018, in the UK alone, there were over 3.5 million experiments performed on animals
- No animals will be harmed in any research led by ARC 2.0 – compared with 1.7 million animals used for each non animal free drug
